Section 1. Chair unboxing

Tools required: knife, scissors or razor knife.

Your chair will arrive in two separate boxes. The larger box contains the chair as well as two smaller accessories boxes contained within. The separate smaller box contains the arms of the chair.

This is how your chair boxes should look upon delivery. If there is any damage, please call Elite Massage Chairs.

Step 1) Cut plastic bands wrapped around box.
Step 2) Lift lid off box and set aside – Lift from the handles on each end of the box.

There is no need to cut the tape on the lid to remove it.

Step 3) Remove all packaging from around chair

See additional photos of chair packaging to be removed on following page
Step 4) Remove accessories boxes and plastic off of chair

The chair is designed to be moved using the wheels on the rear of the chair. The easiest method for removing the chair from the lower box, is to simply roll it out. In order to do so, the chair back must be in the upright position. The chair must be plugged in to raise the backrest. If you are unable to access electricity to power the chair, or if utilizing the wheels to roll the chair out of the lower box is impractical for any reason, you may lift the chair out of the box by the metal frame on each side - skip to step 10 for instruction for this method.

Step 5) Plug in the chair, turn main power switch on.
Step 6) Unpакage the remote. The remote is placed in the footrest when shipping, remove all packaging from the remote, or at least enough packaging to be able to access the front of the remote and the buttons.

Step 7) Raise the backrest. Do not press the power switch on the remote. Press and hold only the following button until the chair is in the full upright position:
Step 8) Cut tape on box edge. Cut tape on the front edge of the box. Lay the box edge flat in order to roll the chair out. As the front edge of the box is held upright with tape only, the box may be easily be used again if needed by re-applying packaging tape where cut.

Step 9. Roll chair out of box. Refer to the following diagram and picture as a reference. The chair may be tilted back with one person to the point that the chairs center of gravity is resting on the rear wheels. Roll the chair out of the box and gently bring back to the ground.
Step 10. (Alternate method for removal) If you are unable to plug in the chair, or if utilizing the wheels to roll the chair out of the lower box is impractical for any reason, you may lift the chair out of the box by the metal frame on each side. This is most easily done with the chair back in the upright position as the center of gravity for the chair is more equally balanced. If you are unable to raise the backrest to the upright position this step may still be followed.

Assembly instructions begin on next page
Section 2: Chair assembly

Tools required: Philips screwdriver, #5 Allen wrench / Hex key (included with chair)

Your chair arms will be located in a separate box from the chair and require installation. There are two accessories boxes (removed in section 1) located inside the large chair box which contain the controller stand and upper air bag / speaker assembly's which also require installation.

Inside the smaller accessories box is the #5 Hex key used to install the arms in step one. Set the controller stand located in the same box aside to install in step four. The speaker / upper air bag assembly’s are located in the larger accessories box. These will be installed in step three.

**Step 1: Install right arm.**

**Step 1A: Connect right arm wires and air pipe.** Identify which arm is the right by the controller stand mount located on the exterior of the arm. Identify the correct side of the chair to install the arm. The Right arm will be where your right arm is located when sitting in the chair.

Locate the two wire plugs and air pipe on the right side of the chair. These plugs should protrude from the square opening shown in the below picture. The wires may be inside the frame of the chair and you will need to reach through the side of the chair to pull them out through the square opening.
Locate the corresponding wires on the interior of the chair arm. Please note that there is one wire and one air pipe from the arm. One wire from the chair frame is not used on the right side only. Connect the white plug wire and air pipe.

Step 1B: Mount right arm to chair frame. Note: Before mounting the arm, remove the silver attaching screws which are pre-screwed into the arm. Locate the white round plastic mounts on the arm, and the corresponding slots on the chair frame. Place the arm onto the frame at these locations. The plastic mounts for the arm should slide into their respective locations on the frame of the chair without applying force; press down slightly on the arm to lock into place. The chair arm will still fit loosely until mounting screws are re-attached. Note also the location of the mounting screw holes on the frame of the chair.
Step 1C: **Install the screws for the arm.** Install the screws removed in step 1B. The silver hex key provided will be used to tighten the screws.

Rear screw location:

Front screw location:
**Step 2: Install left arm.** Repeat the procedure for step one. Note that there are two additional plugs for the left arm, three total, as shown below. Connect the plugs and air pipe accordingly. The remainder of the procedure is the same as the right arm.

**Step 3: Install right and left upper air bag / speaker assembly.**

**Step 3A: Remove plastic covering panel from speaker assembly.** Locate the speaker / upper air bag assembly in the large accessories box. Note the mounting posts and orientation of the speaker which will assist you to differentiate the left from the right assembly.
Remove the plastic covering panel from the rear of the speaker assembly. Remove the one screw from the edge of the panel. You may have to gently pry the panel off of the assembly using a small flat head screwdriver.

**Step 3B: Mount the speaker / air bag assembly** Once the panel is removed, note the location of the wire / air pipe hole in the assembly. This will be used to feed through the air pipe and wire from the mounting location on the chair.
Locate the mounting location for the speaker / air bag assembly on the chair, remove the screws from this location.

Mount the air bag / speaker assembly by inserting the mounting posts into the large holes on the side of the chair. Ensure the speaker is facing upwards as shown. Feed the air pipe and wire through the hole in the speaker / air bag assembly.
Connect the air pipe and wire. Insert screws previously removed from side of chair through holes shown below.

**Step 3C: Replace covering panel:** Replace covering panel, install with screw previously removed.

**Step 3D: Install opposite side speaker / air bag assembly.** The process is the same for each side.

**Step 4: Install remote stand.** The remote stand is located in the small accessories box.
Install the controller stand onto the controller stand mount on the right arm, making sure to line up the indent on the bottom of each piece. Insert screws into each side of the controller stand.
